Description

Online shopping cart helping small scale business owner and retailers, due to covid-19 to sell products. I'm creating this project to support them. Initial plan is targeting Farmers market(Vegetable & fruits market). Planning to add more business categories in an umbrella.

They can sell the product through online, from their own application(Website).

Features

- Basic CRUD operation.
- Separate role for admin and users.
- users can add a certain quantity to their shopping cart and remove the item from the shopping cart.
- Admin user can add, edit, update and remove the product and price.
- Admin can add more categories in future.

Planning and User Stories

- Idea had given from husband and my brother, When my brother mentioned, he had struggling to sell the Fruits and vegetables due to covid.
- Useful for a most of the shopkeepers to sell their product. This is application not only one kind of business, this will support most versatile business.

Planning and Database

- Primary database are for the shop owner and admin users.
- Users can search by product type, example Fruits & vegetable and clothing.
- Admin functionality available with login to perform CRUD operation, this is important to change the price and add/delete products.

What I learned

- Adding bootstrap.
- Thymeleaf Fragments.
- Page validation, Autowired
- Table entity and repository.
- Paypal Checkout.
- Security config.

What's Next

- REST API implementation
- Page entity and repository templates files.

Thank you!!!
